DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 –39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murthy et al. (US 6,373,112) in further view of Nakabayashi et al. (US 6,319,782) and Shiota et al. (US 5,879,970).

Murthy discloses the limitations of claims 1-47:

depositing a silicon-containing seed layer (106, fig. 2) over the high dielectric constant material (104, fig. 2) under seed phase conditions (col. 2, lns. 29-38); and

depositing a silicon-containing bulk layer (108, fig. 2) over the seed layer under bulk phase conditions, the bulk phase conditions selected to result in a higher deposition rate than the seed phase conditions (col. 4, ln. 41 – col. , ln. 9).

3. Murthy discloses the claimed limitations, as described above, except the limitations disclosed below by Nakabayahi and Shiota:

Nakabayahi discloses:

wherein silane includes higher order silane gas;

wherein the seed phase is less than 500 Å/min and the deposition rate for of the bulk phase is greater than 500 Å/min (col. 10, ln. 44 – col. 11, ln. 31);

Art Unit: 2812

Shiota discloses:

using a non-hydrogen carrier gas (col. 1, Ins. 20-40); and

Therefore one of ordinary skill would have combined the limitations disclosed in Nakabayahi and Shiota with Murthy, because Murthy does not explicitly state some of the process conditions that are claimed. Also, Murthy explicitly discloses "other oxides such as for example Hafnium oxides, and the specification does not disclose a distinctive difference between the materials listed in the group of high dielectric materials. Therefore, because Murthy does disclose one in the group it would have been obvious to one of ordinary skill in the art at the time of the invention to use the other materials in the group.
